Updated Symptoms for Coronavirus
The Centers for Disease Control (CDC) has added 6 new symptoms to watch for with Coronavirus. People have reported mild symptoms to severe illness and symptoms may appear 2-14 days after exposure to the virus.
The main symptoms continue to include cough and shortness of breath or difficulty breathing or at least two of these symptoms:
- Fever
- Chills
- Repeated shaking with chills
- Muscle pain
- Headache
- Sore throat
- New loss of taste or smell

The CDC continues to recommend managing symptoms at home unless they include trouble breathing, persistent pain or pressure on the chest, new confusion or inability to be woken, or bluish lips or face. If you are having concerns, reach out to your doctor via phone or a telehealth visit.
Continue to wash your hands often, avoid close contact, cover your mouth and nose with a cloth face cover when around others, cover coughs and sneezes, clean and disinfect.
